

Create Manage and Setup Access privilege

All of Eicra's web application has built-in permission system which was based on ACL architecture, so you can set

permission for role (group) or given user to separated modules. By using role, you can tune up how a register member

can be privileged then normal user how administrator can enjoy more privileged then a registered user and so on.

After having groups, you can create new user for each group. In order to create new user, you go to manage users

(User/User in back-end), here you can create, edit, delete or active for any user. User will have default permission

according the group that it belong to (thus one user can't belong to many groups). However you can still set special

permission for individual user in a group.

The screenshot shows a web application interface for managing roles. At the top, there is a navigation menu with items: HOME, USERS, SITE, CONTENT, MENU, MODULES, SETUP, UTILITY, HELP, and a 'Get Helped' link. Below the menu is a 'Role' section with a user icon and the title 'Role'. A message states: 'The groups are listed as follows. You can NOT remove a group when it remain locked or has at least one user.' Below this is a 'Quick Search' field. The main content is a table with columns: Name, Description, Table registered through below forms, Lock Status, Id, Num. Of Users, and Action. The table lists roles: Developer (ID 100, 1 user, Locked), Administrator (ID 101, 1 user, Locked), Manager (ID 102, 1 user, Locked), Member (ID 103, 0 users, not locked), Landlord (ID 104, 0 users, not locked), and Tenant (ID 105, 0 users, not locked). Annotations with arrows point to the 'Lock Status' column and the 'Action' column. Below the table is a form to create a new role with fields for Name, Description, Register through, and a checkbox for 'Lock this group', followed by a 'Create' button.

Name	Description	Table registered through below forms	Lock Status	Id	Num. Of Users	Action
Developer	Developer	Select.....	Locked	100	1	Permission
Administrator	Administrator	Select.....	Locked	101	1	Permission
Manager	Administrator with limited access to manage registered user[s]	Select.....	Locked	102	1	Permission
Member	Member	Member Registration	-	103	0	Remove Permission
Landlord	Landlord	Member Registration	-	104	0	Remove Permission
Tenant	Tenant	Member Registration	-	105	0	Remove Permission

Set permission:

You can set permission according as separated. Firstly, unlock the group if it's locked and click on the "Permission" like

to customize / modify a group's access privileges. Then the following screen will appear to you.

You are setting permissions for group: **Member - Member**
Below is a list of the modules including its actions:

You can now control each and every group's access privilege just by selecting or deselecting to all module shows up.

When you click on the module's bars above, each module will be expanded and give you option setting up access

privilege.
